How to Run HookPrinter SDK Program Automatically on Startup or after reboot? Use the Windows Task Scheduler to run HookPrinter SDK without UAC prompts and admin rights

⏱ 2022/04/26 / VeryPDF / 💬 0

VeryPDF HookPrinter SDK program is a great software to intercept and capture Printer Jobs in all Windows systems, it supports Windows 7, Vista, 10, 11 and later systems, it also supports both 32bit and 64bit Windows systems. With HookPrinter SDK program, you can intercept and capture printer jobs to SPL and SHD files, then you can call "VeryPDF SPL to PDF Converter Command Line" to convert these SPL files to PDF files or image files for further processing easily.

You may need to run HookPrinter SDK Program to intercept and capture printer jobs automatically after system reboot, but HookPrinter SDK requires administrator permissions, which always triggers a UAC (User Account Control) prompt, so HookPrinter SDK Program can't be ran automatically on system startup by general methods.

Now, we have a solution, you can use Windows Task Scheduler to run HookPrinter SDK every time when your system reboot, here are some steps,

1. Open Task Scheduler.
2. Create a new task.
3. In the "General" tab, ensure the following settings are entered: "Run only when user is logged on", "Run with highest privileges".
4. In the "Triggers" tab, when adding a trigger (schedule), ensure that the "Enabled" checkbox is checked. Please select "At log on" option to run the HookPrinter SDK program.
